

# Recalibration Requirements for EXFO Products

## Recalibrating EXFO units

January 23<sup>rd</sup>, 2023

To Whom It May Concern,

At EXFO, manufacturing and service center calibrations and verifications are based on the ISO/IEC 17025 Standard, which states that calibration documents must not contain a recommended calibration interval, unless this has been previously agreed upon with the customer.

Validity of specifications depends on operating conditions. For example, the calibration validity can be longer or shorter depending on the intensity of use, environmental conditions, and unit maintenance. You should determine the adequate calibration or verification interval for your unit according to your accuracy requirements.

Under normal use, EXFO recommendation is in accordance with the table below.
